About

My name is Christian and I love work to develop products, I share my knowledge with my community ([mxintech](#)) and share my love for technology.

Experience

KIANA PRODUCE / Software Developer

November 2019 - PRESENT

Working with web based applications to get better performance in all the processes of the company. I proposed an CI/CD framework in the development process that took less hours of time to deploy and the infrastructure was mounted on aws ec2 using codepipeline. I developed a full backend application using GO that was fastest, easy to read, easy to deploy and lightest than a PHP/Laravel application. I worked with Linux based systems to reduce costs of infrastructure with minimal requirements compared to the Windows servers of the company. Also I maintained an application in Vuejs.

FREELANCE

January 2019 - November 2019

Freelance working making web based applications and small scripts to automate tasks.

Technologies

Golang	PostgreSQL	Linux (RHEL, DEBIAN)
Aws	Github	Vuejs
Javascript	HTML	CSS
CI/CD	Docker	PHP
Mysql
